Jun 14, 2023

CONTENTS

1 Why? 3

2 Indices and tables 5

2.1 Discussion and support 5

Automatoes is a Let's Encrypt/ ACME client for advanced users and developers. It is intended to be used by anyone because we don't care if you're a robot, a processes or a person.

We will keep the *manuale* command to provide manual workflow designed by the original project and to be a direct replacement from ManuaLE.

CHAPTER

ONE

WHY?

Bacause Let's Encrypt's point is to be automatic and seamless and ManuaLE was designed to be manual.

Automatoes will add automatic workflows and new features to evolve ManuaLe's legacy. The project also will keep performing maintenance tasks as bug fixes and refactory.

Automatoes is an ACME V2 replacement to ManuaLE.
